1. What is the final title of your project?

mYOUsic

2. What is the problem statement of your project?

Our project is trying to solve the lack of music communities and hopes to connect like minded people together. Whether it is to share a concert video or a new MV, our project website will allow people to interact with each other. An example of our website usage is if a person has trouble finding a specific song or type of music, they could post about it on our website and people can help find it. Our website can also start discussions where people can talk about their interests without fear of judgment. All in all, our website can lead to long-term online friendships and great conversations.

3. Who are the potential stakeholders of your project?

Our platform is for everyone of all ages and backgrounds. mYOUsic has an algorithm that is catered to you. You are able to share and discover new music, along with creating groups with fellow fans.

4. What is this project's scope (boundaries, what is in and out?)

The scope of the project we wish to create is to develop a website that allows users to share music in a twitter/reddit style interface. Allowing users to interact with one another, make groups for their favorite music artists, create forums to discuss opinions, and a space to share photos of concerts and other musical experiences. The purpose is to make a space soly for music lovers to go and interact with each other.
